                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to nucleic acid vaccines for conferring immunity to rickettsial infection, including Ehrlichia ruminantium (formerly Cowdria ruminantium). The invention also relates to novel E. ruminantium polynucleotides and their corresponding proteins. Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting antibodies to pathogens. The present sequence is E. ruminantiu hypothetical o-sialoglycoprotein endopeptidase (lhworf4) protein

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression of the following a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense concleic acid; (4) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular composition; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway capable of specifically binding cequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation; (8) compound that influences the biological pathway in which a proliferation creditar proliferation or the biological compound is activity; (9) manufacturing an antibotic; (10) profiling a compound's activity; (9) manufacturing an antibotic; (10) profiling a compound's activity; (9) manufacturing an antibotic; (10) profiling a compound's activity; (10) identifying a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (10) identifying the target of a compound that inhibits the gene compound is activity; (10) identifying the target of a compound that inhibits the compound compound that inhibits are useful for identifying proteins or accessing for homologous nucleic acids are useful for identifying proteins or for screening bandledens nucleic acids required confidency processes. The solution confidence confidence molecules for rational confidence confidence molecules for rational confidence confidence confidence and confidence confidence confidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
